Summary

Security-minded platform engineer with 2+ years managing enterprise VMware infrastructure across 400+ virtual machines and hands-on experience deploying and operating Wazuh SIEM in a multi-host environment. Holds a B.S. in Software Engineering and brings a developer's lens to threat detection — including real-world investigation of process masquerading and blockchain-based C2 malware using MITRE ATT&CK methodology. Pursuing CompTIA Security+. Seeking a SOC Analyst role where infrastructure depth and engineering fluency translate into sharper detection and faster triage.

Technical Skills

Security & SIEM: Wazuh 4.14.5 (deployment, agent enrollment, rule tuning, dashboard configuration), MITRE ATT&CK framework, incident triage, log analysis, threat investigation, IOC documentation
Networking & Infrastructure: VMware vSphere/VCD, Proxmox, NAT/DNAT, iptables, nftables, TCP/IP, DNS, Grafana, Zabbix, Docker
Operating Systems: Linux (Gentoo, Ubuntu, RHEL/CentOS, Arch), Windows Server
Development: Java, Spring Boot, TypeScript, React, PostgreSQL, Bash, Git, GitHub Actions (CI/CD)
Certifications: CompTIA Security+ (*in progress*), AWS Cloud Practitioner (*in progress*)

Experience

- Cloudkey** Plano, TX
Data Center Technician / Platform Associate May 2024 – Present
- Operate and maintain a multi-tenant VMware Cloud Director platform hosting 400+ client VMs across 3 geographically separated data center sites, ensuring platform availability and workload isolation
 - Deployed and configured Wazuh 4.14.5 SIEM — provisioned the manager VM, enrolled agents across Gentoo, Ubuntu, and Proxmox hosts, and resolved NAT/DNAT misconfigurations on a VCD edge gateway to restore agent-to-manager connectivity
 - Investigated a suspected process masquerading incident involving a renamed system binary (TSTHEMES.exe → TSTHEME.exe); applied MITRE ATT&CK T1036 to assess scope and document findings
 - Reduced MTTD on performance anomalies by 10% and MTTR on infrastructure incidents to under 15 minutes via proactive Grafana and Zabbix monitoring; reduced escalation rate 18% through incident runbooks
 - Configure and maintain firewall rules, network segmentation, and DNAT/SNAT policies on VMware Cloud Director edge gateways for tenant traffic isolation
- O'Neil Digital Solutions** Plano, TX
IT Support Technician Jan 2023 – May 2024
- Resolved hardware, software, and connectivity incidents in an ITIL-aligned environment; maintained SLA compliance across endpoint and network infrastructure tickets

Security & Engineering Projects

- Home SOC Lab — Wazuh SIEM** | *Wazuh, VMware, Proxmox, Linux* 2026 – Present
- Deployed Wazuh 4.14.5 behind a VMware Cloud Director edge gateway; configured DNAT rules to route agent enrollment traffic (ports 1514/1515) across network boundaries between separate vDCs
 - Enrolled agents on heterogeneous hosts — Gentoo (compiled from source, resolved CMake 4.x policy break), Ubuntu, and Proxmox bare metal; validated event ingestion and syscollector inventory in OpenSearch Dashboards
- EtherHiding Malware Analysis** | *Malware Analysis, Threat Intel, JS Reverse Engineering* 2026
- Decoded a multi-layer obfuscation chain (base64 → XOR key 121) from a malicious script injected into a compromised website; identified the payload as a **BW/EtherHiding** injector using a Polygon smart contract (0x994Cb8...) as an immutable C2 channel to evade domain takedown
 - Attributed to SocGhosh/FakeUpdates family; documented full IOC set — contract address, function selector, RC4 API key, and storage identifiers — and mapped 9 attack delivery modes (fake BSOD, Cloudflare, browser update lures)
- Art E-Commerce Platform** | *Spring Boot, React/TypeScript, Stripe, PostgreSQL, Docker* 2025
- Built payment and order management system with idempotent Stripe webhook handling and role-based access control (RBAC) via Spring Security and JWT; implemented presigned URL pipeline to S3-compatible object storage
 - Deployed full CI/CD pipeline via GitHub Actions and Docker Compose on a self-hosted runner; maintained secrets management and environment isolation across staging and production

Education

- Western Governors University** Remote
B.S. in Software Engineering Graduated January 2026
- Collin County Community College** Plano, TX
A.A.S. in Computer Networking & Telecommunications Graduated May 2023
